Subject: clean river?

Travis Williams self appointed so called Riverkeeper gives us his two cents again. I read, if a river is left alone, it will clean its self in 10 years. When they go in to dredge & stir up all that sediment it is a man made disaster. If the pollutants have been there for this many years & no one has died why disturb it? Those river boater squatters are dumping more crap & garbage in the river, get rid of them first.
